

How To...

Day 10: Build Sugar Cube Towers

Instructions

1. Add a few drops of food colouring to some water and pour onto the plate.
2. Add a stack of sugar cubes and observe what happens. The coloured water should move up the stack of cubes and eventually make them collapse.
3. Try adding a small sheet of foil on top of one sugar cube and stack some more on top. Does this stop the water reaching the top cubes?
4. Try the same with some cling film, and some paper or tissue. Which work the best?
