

How To...

Day 23: Create your own farm shop

Take a look at the fantastic Farming STEMterprise projects from NFU Education that take children through each stage of setting up a farm shop business: considering seasonality, crops, ingredients, nutrition, designing recipes and much, much more.

Instructions

1. Take a look at the project that fits best with the age of children involved.
2. The projects are tailored to deliver key content from the National Curriculum but are flexible and can be adapted.
3. Look at the Project Overview to see the steps for the project. You can start at the beginning and work your way through, or if you want to be more flexible, you can pick and choose the steps that work for you.
4. Pick out the bits you want to have a go at and get stuck in.
5. Each step has a clear materials list and an overview.
6. Have a look through the lesson plans and PowerPoints for additional information.
7. Have fun!

There are also Farmvention and Science Farm suitable for KS1, and #LockdownLearning in collaboration with Eat Farm Now.
